## **AGREEMENTS 1511**

### **HAZMAT Environmental Services**

### **QUESTIONS AND ANSWERS**

September 30, 2009

#### **Question 3:**

How much weight will be placed on "other" services such as Lead Paint, Asbestos, and legal interpretations during the evaluation process?

#### **Response to Question 3:**

Lead Paint and asbestos as they relate to buildings, are under separate agreement. Asbestos utility pipe and electrical conduit are administered through this agreement – 3% depending on size of job. No legal work will be required.

#### **Question 2:**

Can you provide a distribution (historic or envisioned) of the types of projects Phase I, Phase II, Phase III, ect?

#### **Response to Question 2:**

Phase 1 – 42%; Phase 2 – 16%; Superfund - 9%; UST - 21%; AST - 2% Hazardous Disposal - 5%; Air Waste Management - 2%; Misc - 3%

#### **Question 1:**

The scope of work mentions the firm must also have knowledge and experience in Soil Engineering, and geologic and hydro-geologic services. Since contaminate remediation requires very similar types of knowledge and experience, can you elaborate on what other Soil Engineering, Geologic, and Hydrogeologic services DelDOT is envisioning for this work?

#### **Response to Question 1:**

We are looking for these specialties as they relate to all aspects of contamination and remediation. We do not envision going outside this agreement for these aspects of the work and will do so exclusively by keeping these within the intents and needs of this agreement.
